TenX is the major game changer

As it enables users to spend their blockchain assets through their smartphone or a physical debit card at over 36 million points of acceptance online and offline. System is currently processes about $100,000 of transactions a month. By the end of 2018, it's targeting $100 million in monthly transactions and a million users.

"TenX raised $80 million with about half to be used to expand operations while the rest will provide liquidity for a cryptocurrency exchange in the works" (c) Dr. Julian Hosp, Co-Founder TenX, interview for Bloomberg

Client/Target audience

Users who are interested crypto

Product overview

TenX unique feature is that the client doesn't have to pay forex fees for the cryptocurrency transactions. Owlab team have built wallet web application for TenX system. App allows user to add cryptocurrency wallets and connect them to the Visa credit cards.

Our development team

Thanks to the efficient and well-coordinated work of a small team, the development of telegram bots saves the client's resources significantly.

Our approach

Testing
We paid special attention to testing the usability of the solution so that its interface has a minimal learning curve.

Django
Interpreted, high-level and general-purpose programming language.

Python
A class-based, object-oriented programming language that is designed to have as few implementation dependencies as possible.

Java
A class-based, object-oriented programming language that is designed to have as few implementation dependencies as possible.

Solution overview

Owlab team developed the perfect wallet web application for cryptocurrency exchange system that enables users to add cryptocurrency wallets and connect them to credit cards.
